### Important

No cut-protection clothing can provide absolute protection against injuries by chainsaws. The degree of protection depends on numerous factors (e.g. speed of the chainsaw, engine torque, angle at which the bar contacts the fabric, working position - stooping or upright, etc.).

This cut-protection is not a replacement for safe working procedures. Incorrect use of a chainsaw can result in accidents. You should therefore observe the safety regulations of the appropriate authorities and the safety notes in the operating instructions being used.

Class 2

RIS-3279-TOM

Model: SS-1130155\*\*\* Only

When selecting the correct size of trouser the lower figure is based on the waist being un-stretched whereas the higher figure is based on the waist being fully stretched. Please allow for freedom of movement when selecting the correct trouser size. Trousers should always be worn with a belt or braces ensuring the trousers are worn correctly and not as drop crotch style.

# Carefully Read these instructions before using this product

This product is designed to minimise the risk of/provide protection to the legs against accidental contact with a hand held chainsaw machine. However, always remember that no item of PPE can provide full protection and care must always be taken while carrying out the risk related activity.

# Performance and limitations of Use

The products have been tested in accordance with EN ISO 11393-2:2019 for Class 1 performance (protection at linear chainsaw speeds up to 20 m/s) and if stated EN ISO 20471:2013 Protective Clothing - High visibility warning clothing for Class 2 (comply with RIS-3279-TOM). The products are not designed to offer protection to the wearer against any other hazard e.g. against welding, chemicals, contact with electrical current.

# There are different classes and forms of leg protectors:

- Class 1 (v) = 20m/s (x) chain speed standard class
- Class 2 (y) = 24m/s (x) chain speed
- Class 3 (v) = 28m/s (x) chain speed

Class 3 offers a higher level of protection than class 2, class 2 a higher level than class 1.

# Form / Design A

Standard protection (The cut protection covers the front and 5cm of the back of the legs) Form / Design B

Chaps (Cut protection areas as design A)

## Form / Design C

Surrounding protection (The cut protection covers the front and back of the legs)

## Compatibility

To optimise protection, in some instances it may be necessary to use these products with suitable protective boots, gloves, helmet, and ear defenders. In this case before carrying out the risk related activity consult your supplier to ensure that all your protective products are compatible and suitable for your application.

Design C Class 1 (20 m/s) - Chainsaw Protective Trouser with protective area over the entire front of both trouser legs plus protection approximately 20cms upwards from the crotch with a gap of no more than 3cms in the middle. Protective area at the back, roughly up to the crotch.

## EN ISO 20471:2013

Protective Clothing - High visibility warning clothing (Orange RIS-3279-TOM Issue 2:2019) This high visibility garment must not be modified. It must be kept clean to be effective. Replace the garment if permanently stained or faded, or otherwise damaged, Regular comparison against a new garment is recommended. The aftercare instructions must be followed as improper treatment may alter the garment's performance. The index number refers to the area of visible material (1 to 3 - where 3 is highest class of conspicuity) Limitations of use: this garment should be worn fastened at all times to provide optimum conspicuity.

## Improper Use

Dirty clothing may lead to a reduction in protection and if at any time this garment is un-recoverably damaged, soiled or contaminated, it should be replaced immediately. Dispose of this garment appropriately at the end of its life - textile materials may be re-cycled. No liability will be accepted for garments where care labels have been ignored, defaced or removed. The garment should be worn fastened at all times to provide the correct level of protection as stated above.

# Marking:

The product is marked with:

- The washing instructions.
- 2. The CE mark showing that the product meets the requirements of the PPE Directive 2016/425
- 3. Identification of the manufacturer/authorised representative and the product code/article number
- Product batch number
- Manufacture date
- 6. Product Warning

## CARE INSTRUCTIONS

To obtain the best possible protection and comfort when using this safety product, it is

No cut-protection clothing can provide absolute protection against injuries by chainsaws. The degree of protection depends on numerous factors (e.g. speed of the chainsaw, engine torque, angle at which the bar contacts the fabric, working position - stooping or upright, etc.). This cut-protection is not a replacement for safe working procedures. Incorrect use of a chainsaw can result in accidents. You should therefore observe the safety regulations of the appropriate authorities and the safety notes in the operating instructions being used.

Examinations have shown that contamination of the clothing (by, for example, tree resins, oil or fuel residues in the material) can have a negative effect on the function of the cut protection

clothing. The number of times the clothing is cleaned or washed can also (due to the mechanical effects of the washing machine) reduce the effectiveness of the cut protection clothing. In order to ensure the best possible protection, the following rules for cleaning and care of the cut protection clothing should be observed.

Cut protection clothing requires special care and should be cleaned regularly. It should be cleaned every week if worn daily with average soiling. It should be washed immediately after use if severely soiled. Conventional detergent is recommended for washing. Do not use fabric conditioners. Always wash with the zipper closed. After washing, pull the cut protective clothing into shape while it is still damp and dry it in the air. Excessively high washing temperatures or drying of the clothing in an electric dryer will reduce the protective function and the wearing properties by shrinkage. Wash before the first use and pull into form after washing.

After washing lay the garment flat and reshape the trousers whilst still wet especially the legs to realign the protective material

are cleaned as specified before they are reused.

After washing lay the garment flat and reshape the trousers whilst still wet especially the legs

Avoid damaging the clothing by contact with sharp objects (the chain of the chainsaw, thorns,

metal tools, etc.) Also avoid contact with aggressive substances such as acids, oils, solvents,

fuel. Animal excrements and with hot objects (exhaust pipes, etc.) and other heat sources

Important! If the garments are smeared with fuel, oil, grease or other inflammable substances

while working change clothes before continuing work - fire hazard! Ensure that the garments

# Storage and transport

The garment should be stored in a dry well ventilated room. Allow to dry thoroughly, avoid excessive folding, store preferably vertically away from UV light and exposure to liquids.

# Fitting and Sizing

To put on and take off the garment always take care, fully open the zip. Only wear garments of a suitable size. Products which are either too loose or too tight will restrict movement and will not provide the optimum level of protection. The size of these garments is marked on a label attached inside and they are available in the following sizes, S, M, L, XL, XXL, 3XL. 4XL. Use of braces is recommended. The leg of the protective boots should be overlapped. However, the clothes should not be too wide, in order to avoid obstructions, for example from getting caught up on branches or bushes.

## This product is CE Marked.

EU Type examination for EU Regulation 2016/425 and ongoing conformity: SGS Fimko Ov. Takomotie 8. FI-00380. Helsinki Finland (Notified Body 0598)

The above will undertake Module C2 or D Assessment for on-going product and / or material testing
